

WORKHORSE

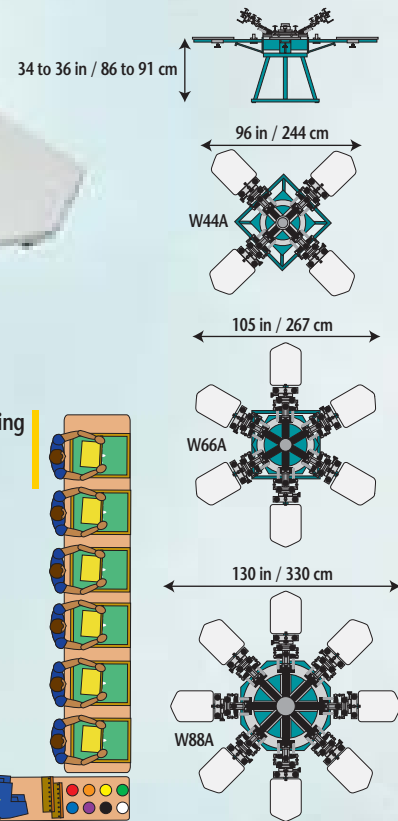

All Heads Down Series • Manual Textile Printer

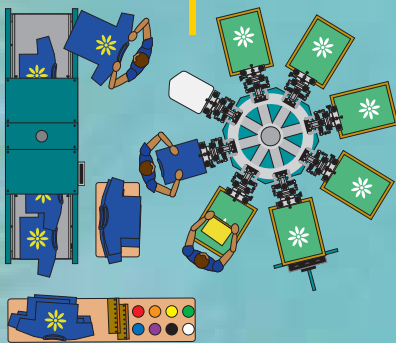

Floating All-Heads-Down Design

What is all heads down printing and is it right for you? All Heads Down printing is simply a slightly different printing technique that requires a slightly different printing machine. With our Workhorse Original or Modular Series, multiple operators increase production by assisting with the loading and unloading of garments, while one operator prints. This technique is called Rotary Load Printing. Workhorse All Heads Down Series features a floating head design enabling multiple operators to increase production by assisting with printing. This technique is called All Heads

Down Printing. Both methods increase production. The rotary load technique is by far the most widely used technique. The all heads down printing technique is employed primarily in textile producing countries as an alternative to table printing.
